**Data Flow Diagrams:**

Data Flow Diagrams (DFDs) illustrate how incoming tickets are processed and routed within the system. The DFD shows the interaction between the End-User (submitting the request), the ServiceNow System (specifically Flow Designer), and the Operations Related database table.

The DFD depicts how the system intercepts the new ticket data to validate the 'Issue' field against predefined conditions. If the issue matches a specific criterion (e.g., "Regarding Certificates"), the system automatically processes an update to populate the "Assigned to group" field, routing the ticket to the correct support team and ensuring efficient resolution.

## User Stories:

User stories define what different users need from the system in simple, goal-focused language. In this project, they help ensure that **support tickets are automatically routed to the correct team based on the issue type, reducing manual effort and resolution time.**

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
End-User	Ticket Submission	USN-1	As an End-User, I want to submit a ticket for my "Operations related" issue.	The system must allow me to select an issue from a list (e.g., "Unable to login," "Regarding Certificates").	High	Sprint-1

<b>System (Autocheck)</b>	Automated Ticket Routing	USN-2	As the system, I must check the "Issue" field when a new "Operations related" ticket is created or updated.	If the "Issue" is "Regarding Certificates", the system must assign the ticket to the "Certificates" group.	High	Sprint-1
<b>System (Autocheck)</b>	Automated Ticket Routing	USN-3	As the system, I must check the "Issue" field when a new "Operations related" ticket is created or updated.	If "Issue" is "Unable to login", "404 error", or "Regarding user expired", the system must assign the ticket to the "Platform" group.	High	Sprint-1
<b>Support Agent (Platform)</b>	Ticket Queue Management	USN-4	As a Platform Support Agent, I want to see only tickets relevant to my team in my group's queue.	When a ticket is assigned to the "Platform" group, it appears in my queue. Tickets for "Certificates" do not.	Medium	Sprint-1
